

CareSync — Diagram Atlas

Eight required diagrams plus the additional ERD. Prepared October 6, 2026. Current-state assumptions require clinic validation; deployment shows the local development topology.

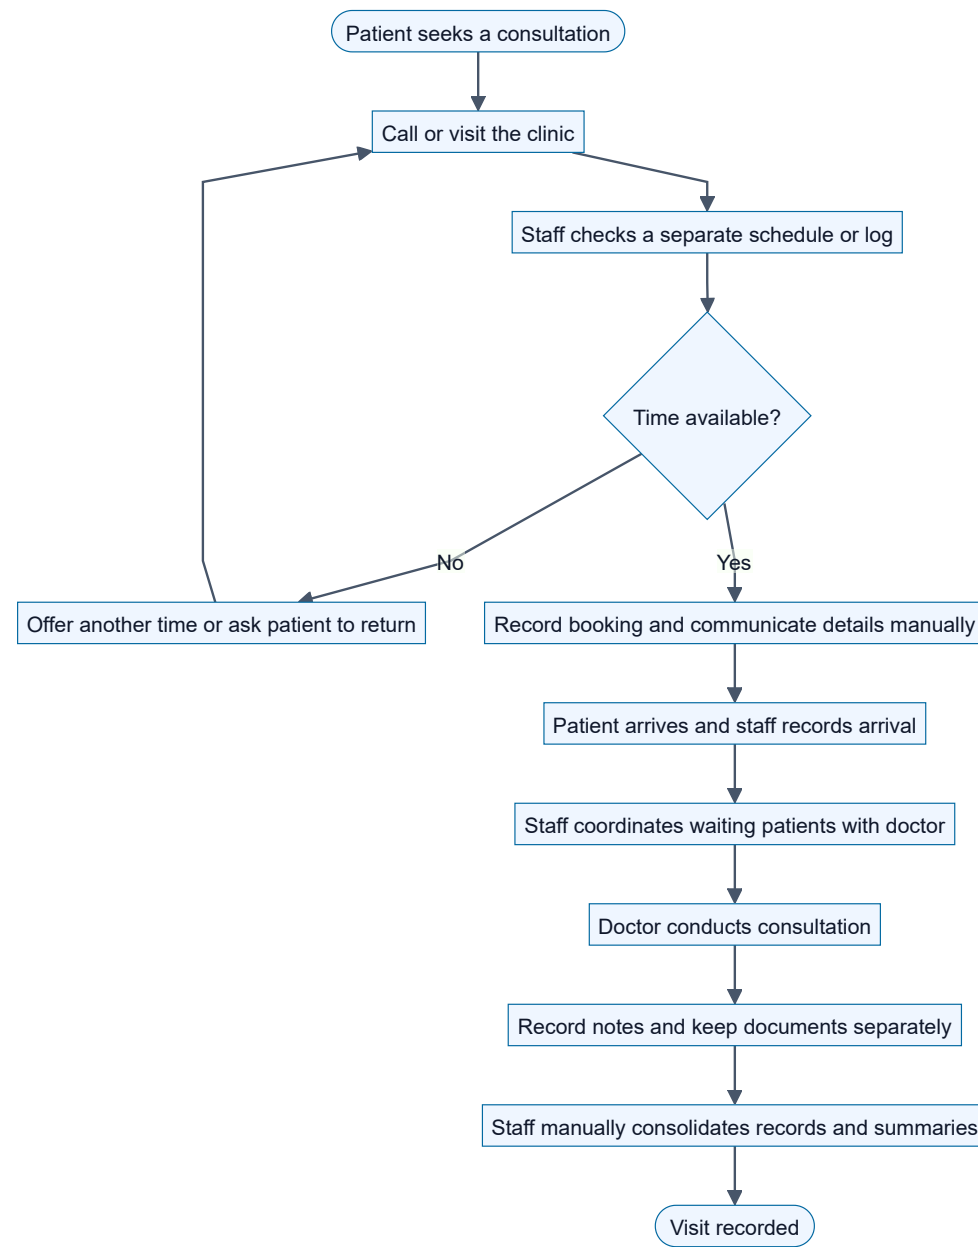

Figure 1. Assumed manual current-state process. Validate with clinic observations.

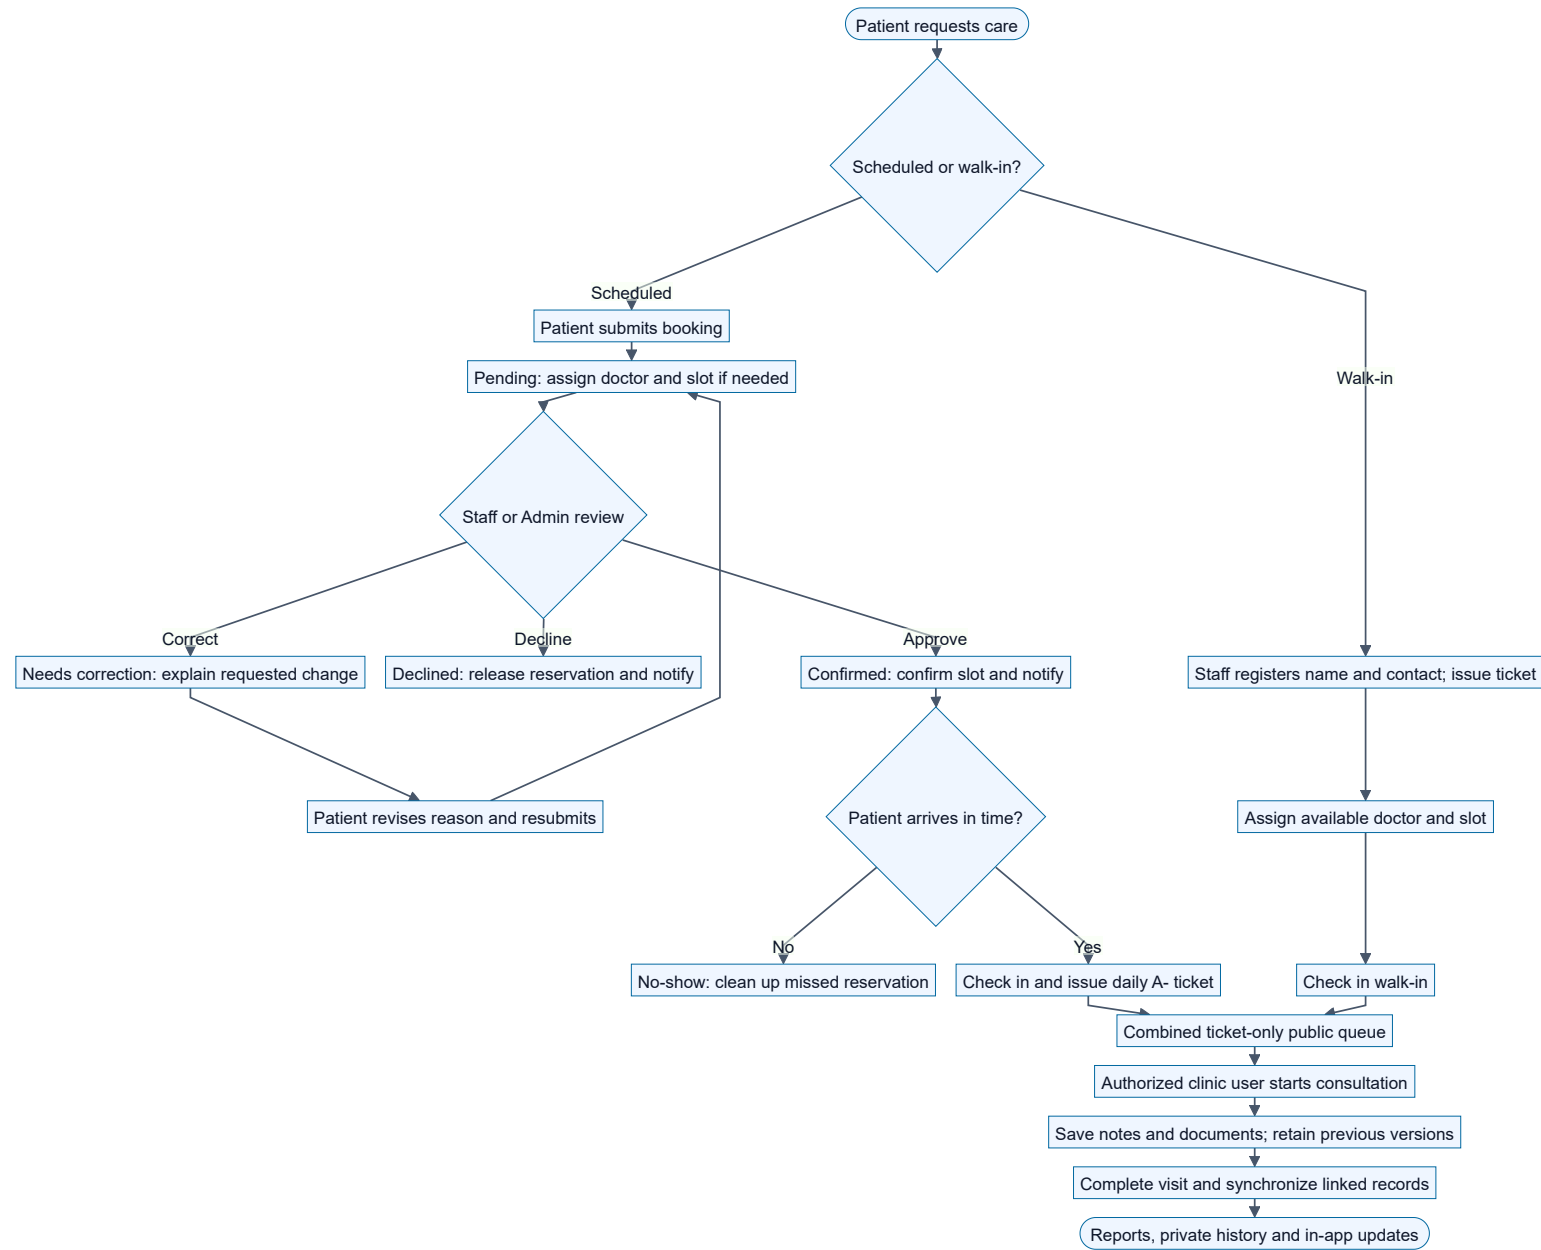

Figure 2. Target clinic workflow; cancellation paths are discussed in the text.

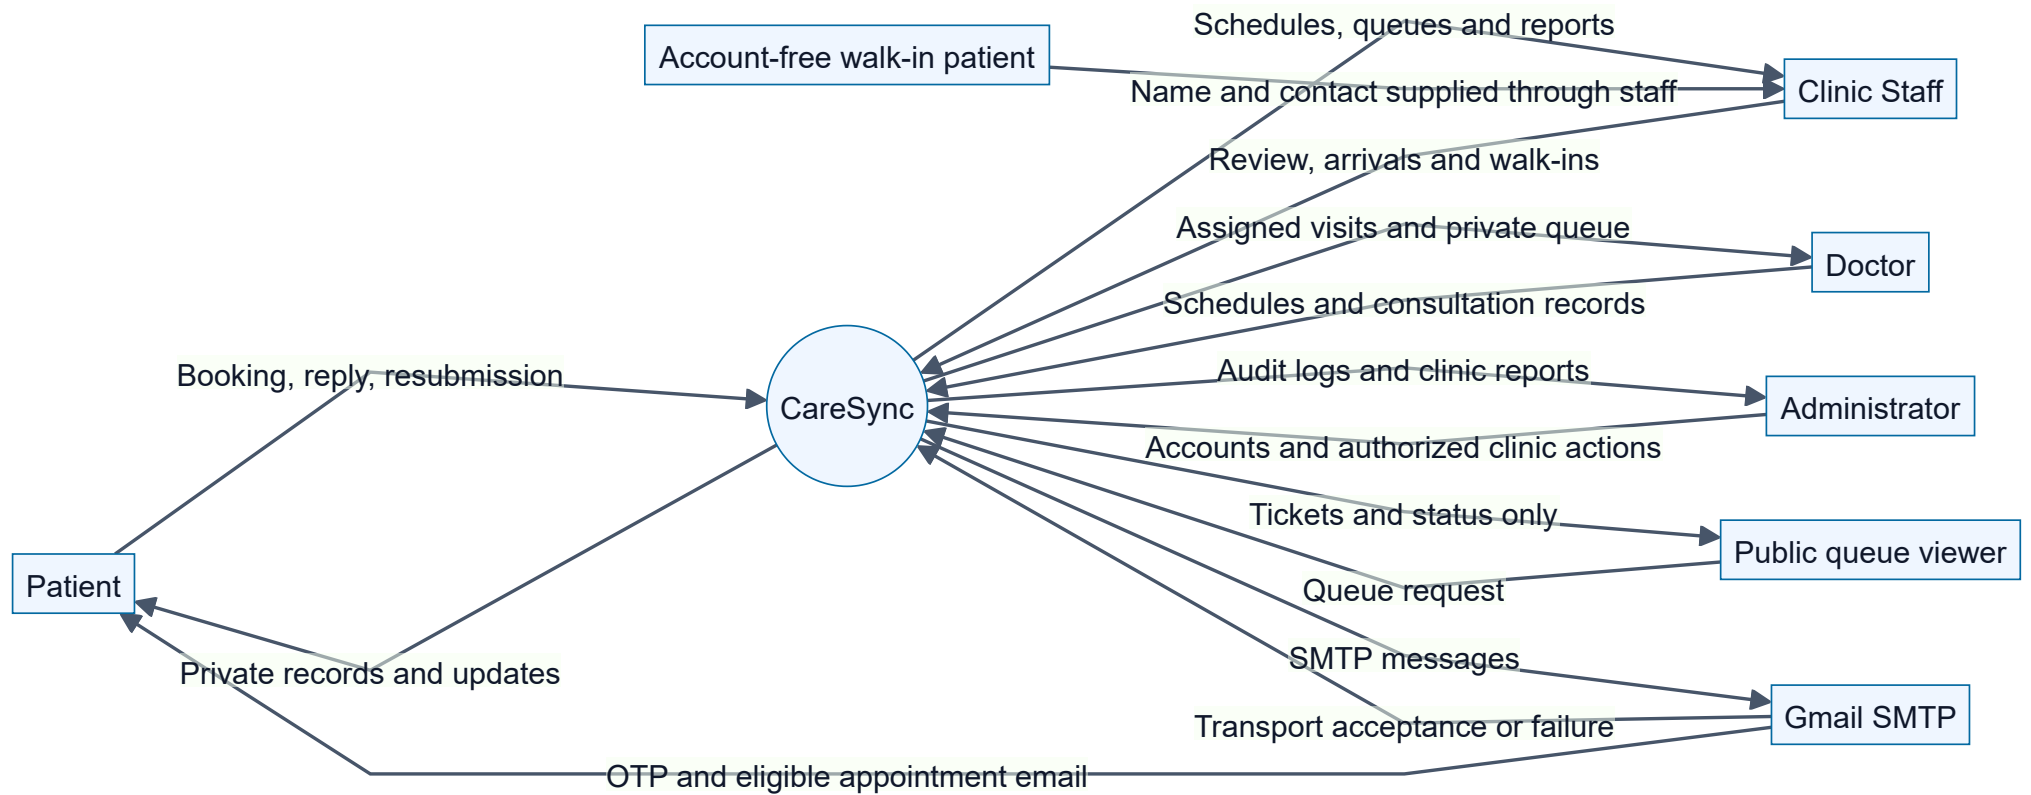

Figure 3. System context and external interactions.

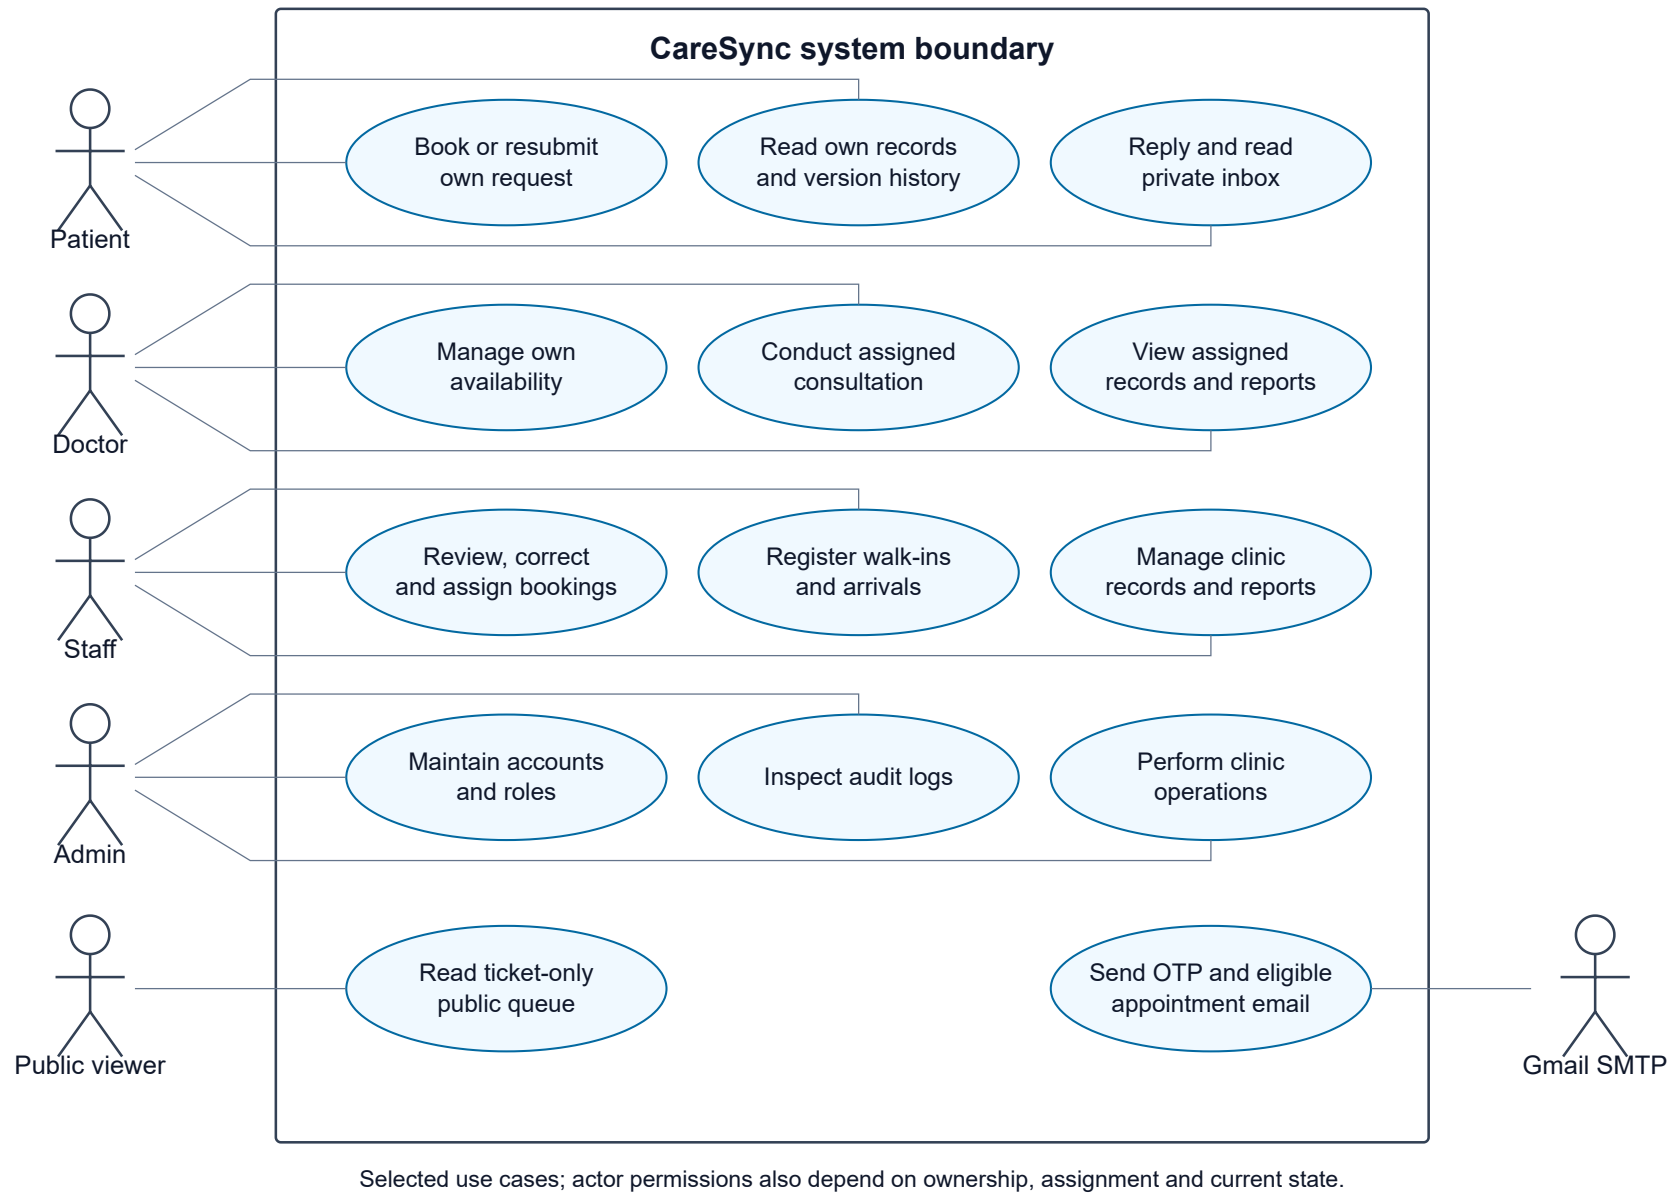

Figure 4. CareSync UML use-case diagram.

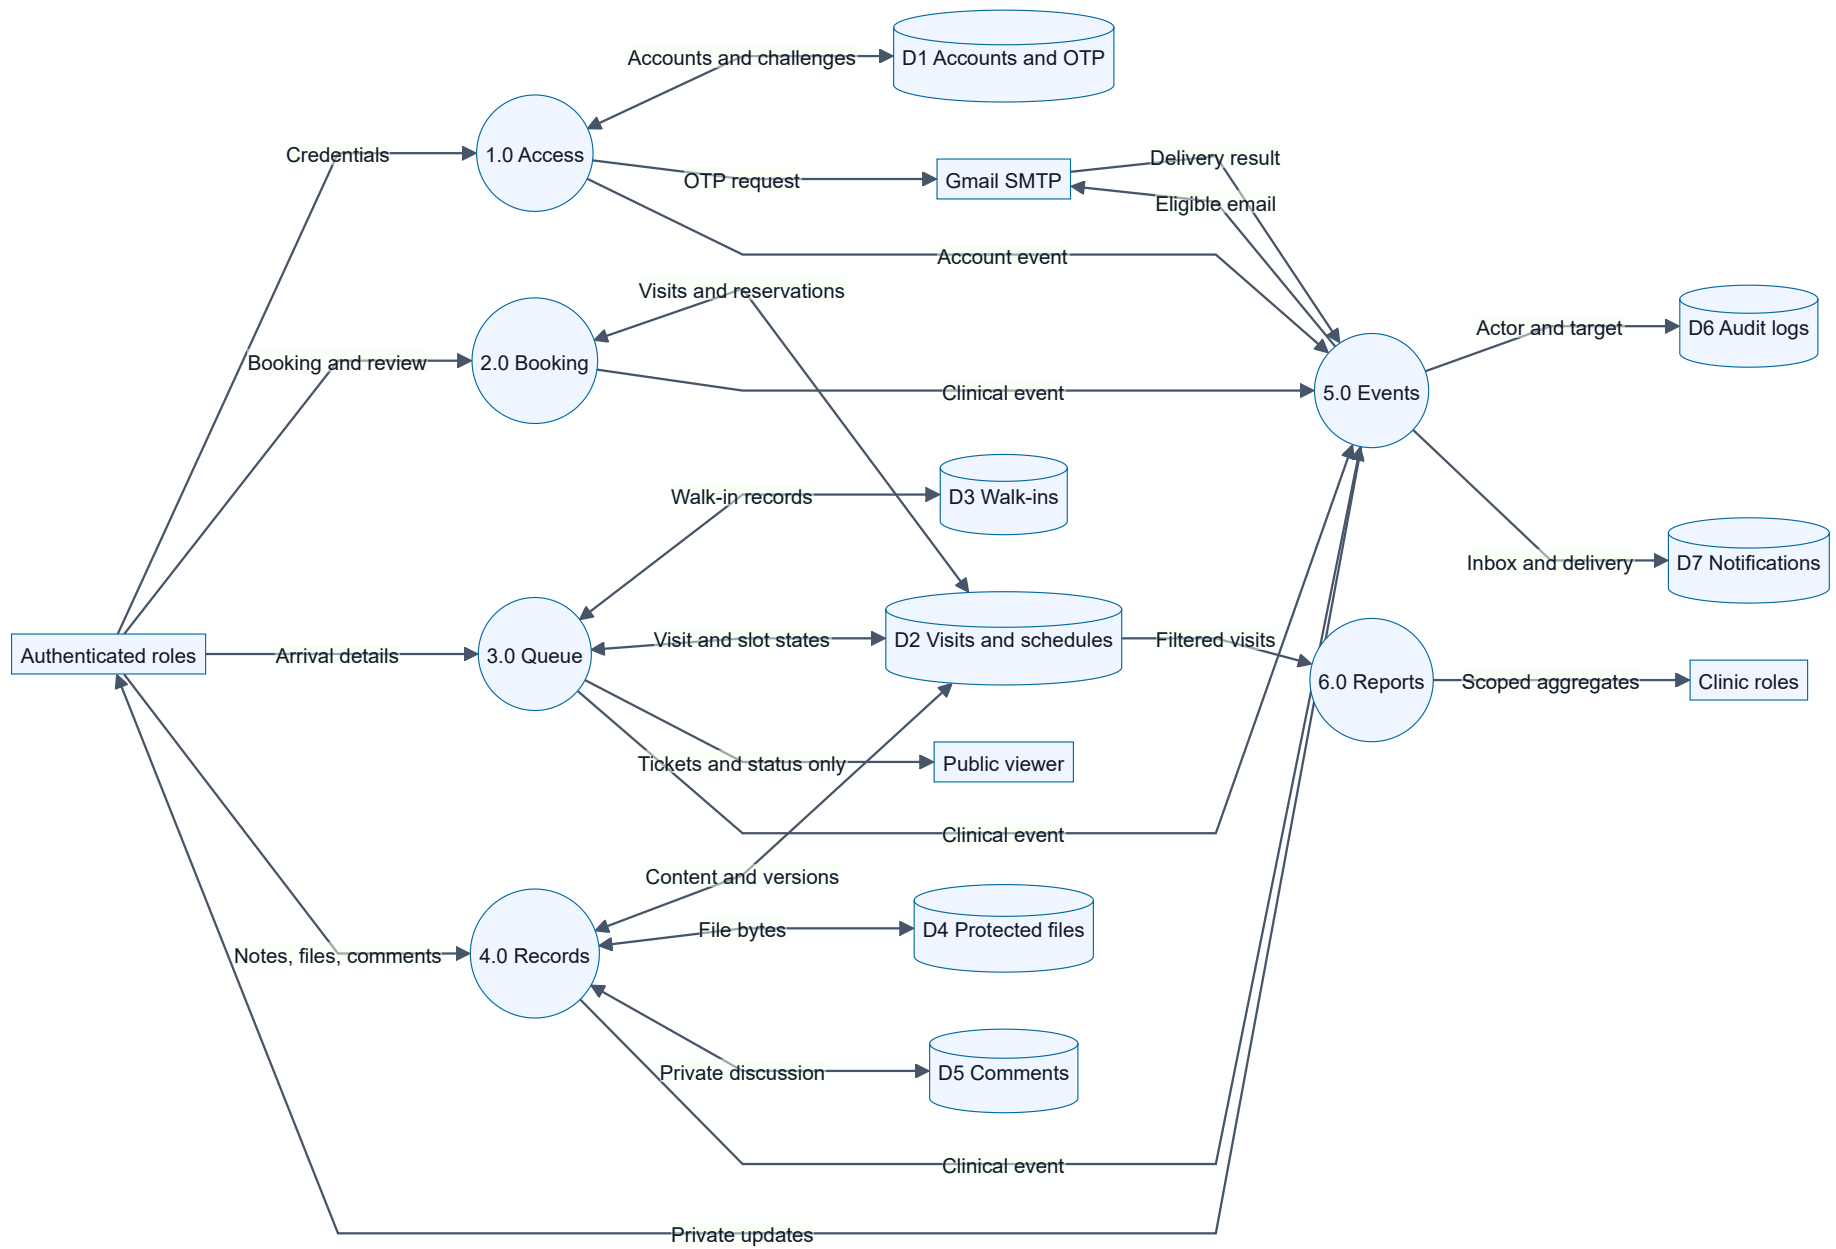

Figure 5. Level-one logical data-flow diagram.

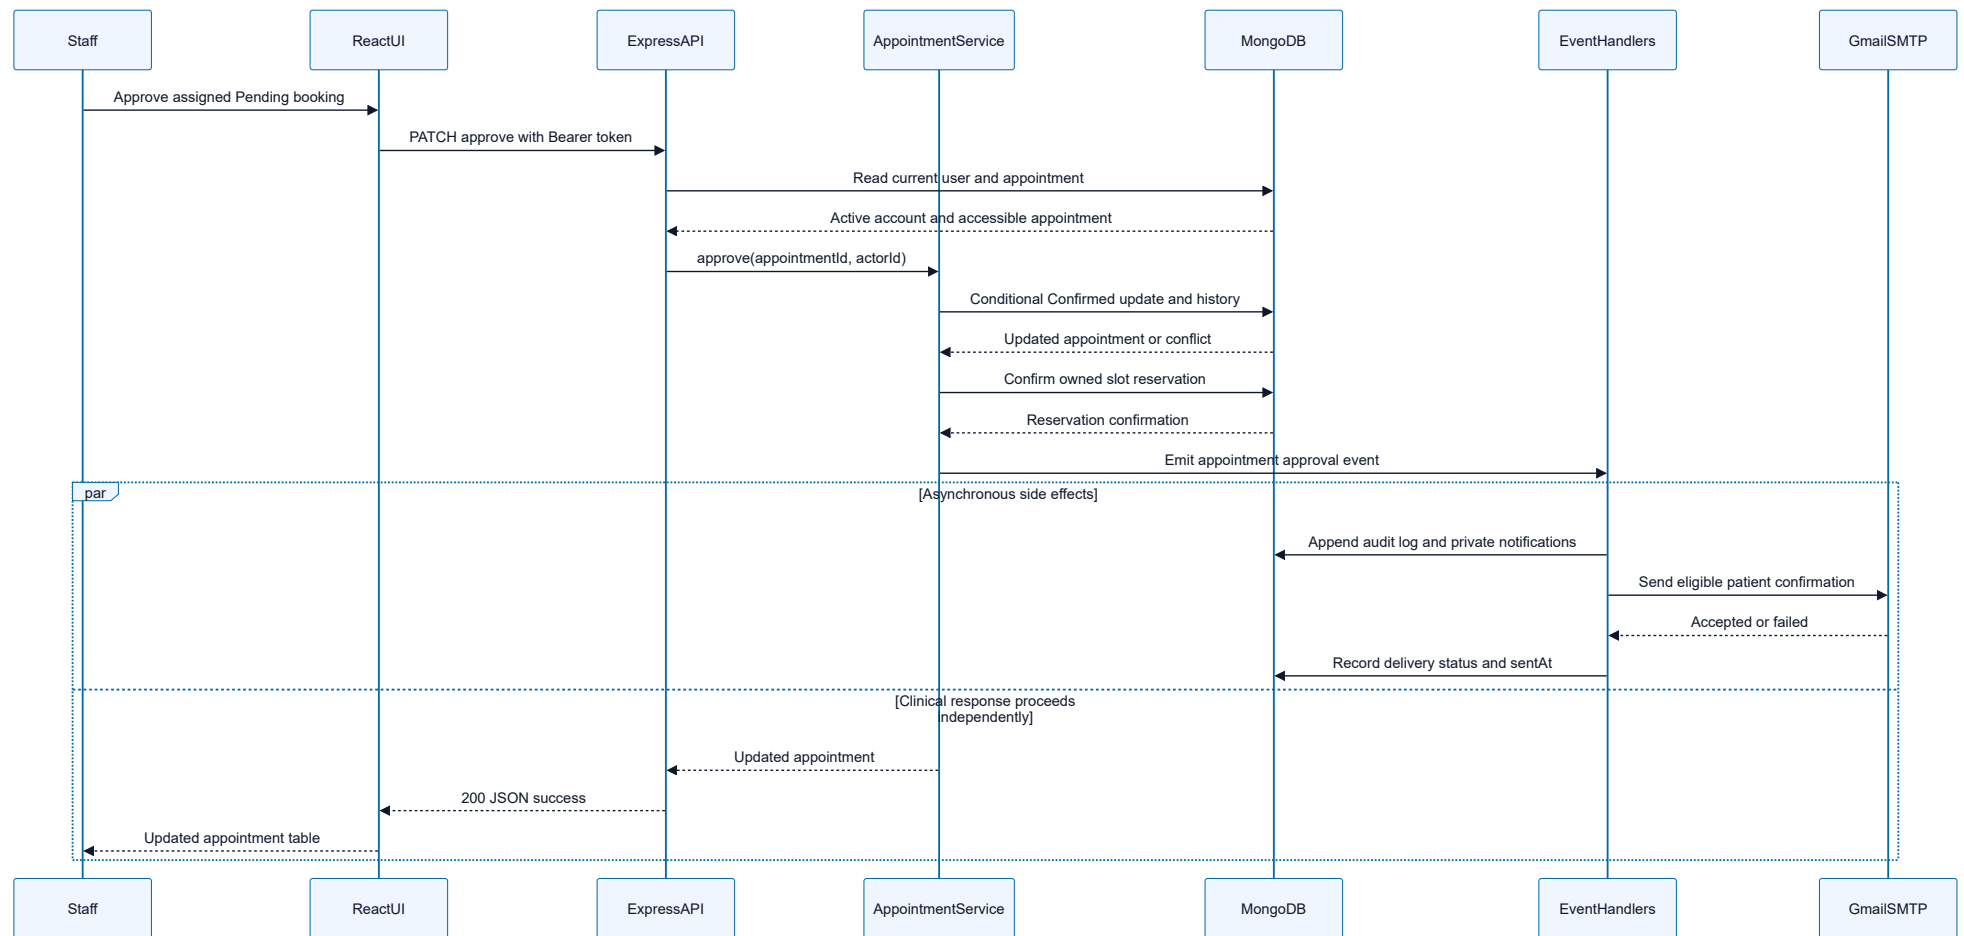

Figure 6. Approval interaction sequence; handler completion and API response are independently timed.

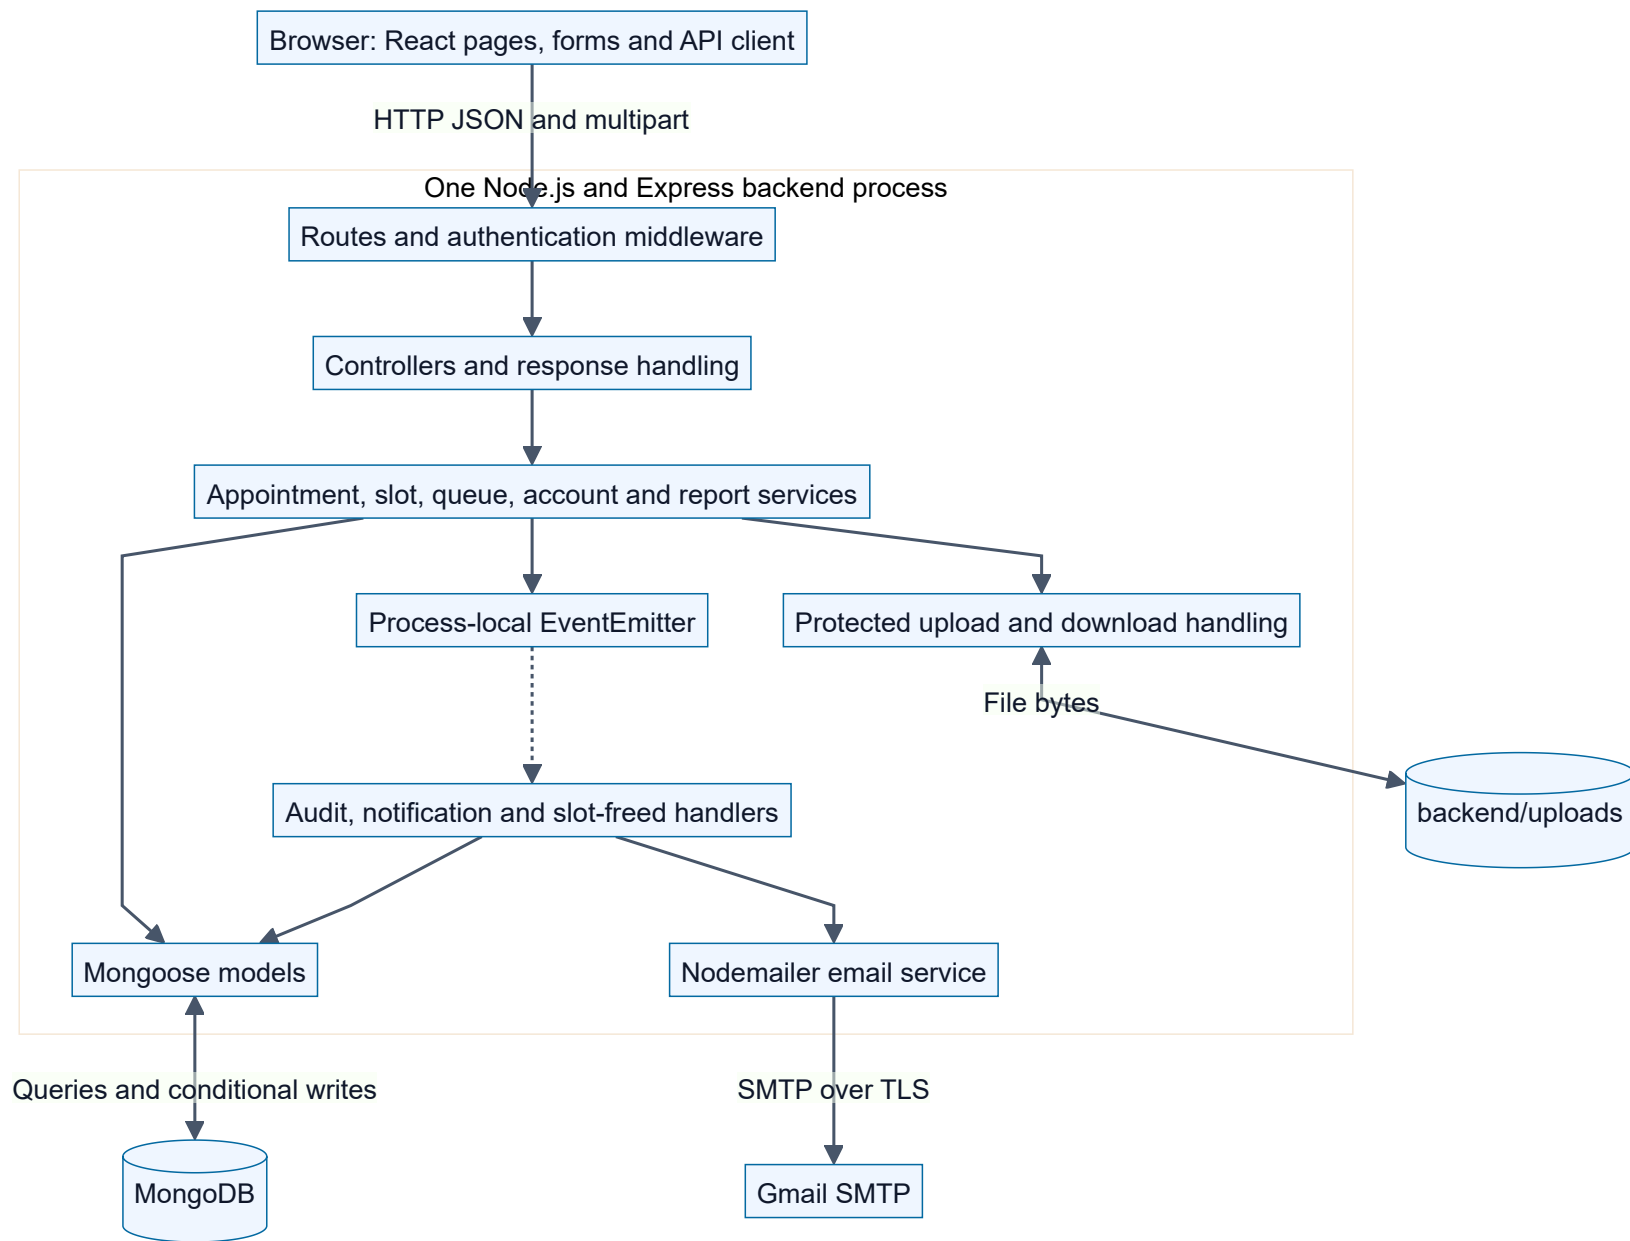

Figure 7. Logical application architecture inside a single Express backend.

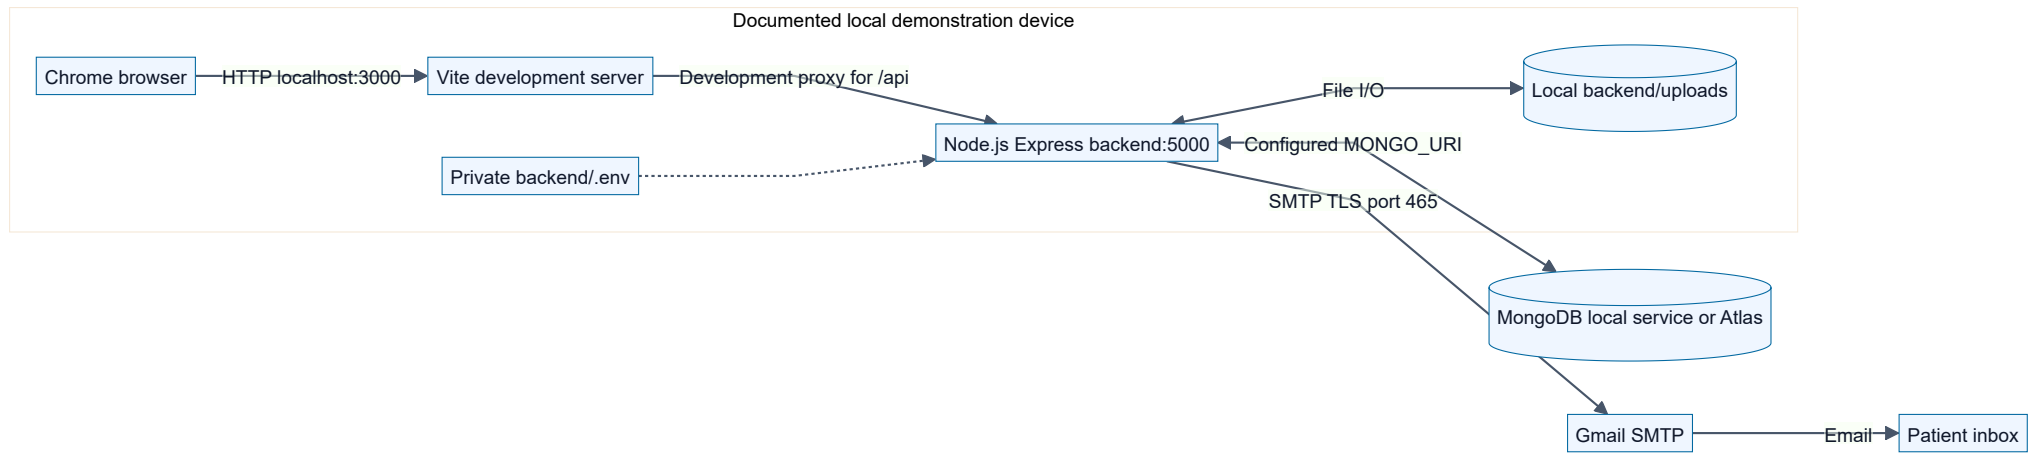

Figure 8. Local demonstration deployment with configuration-dependent MongoDB.

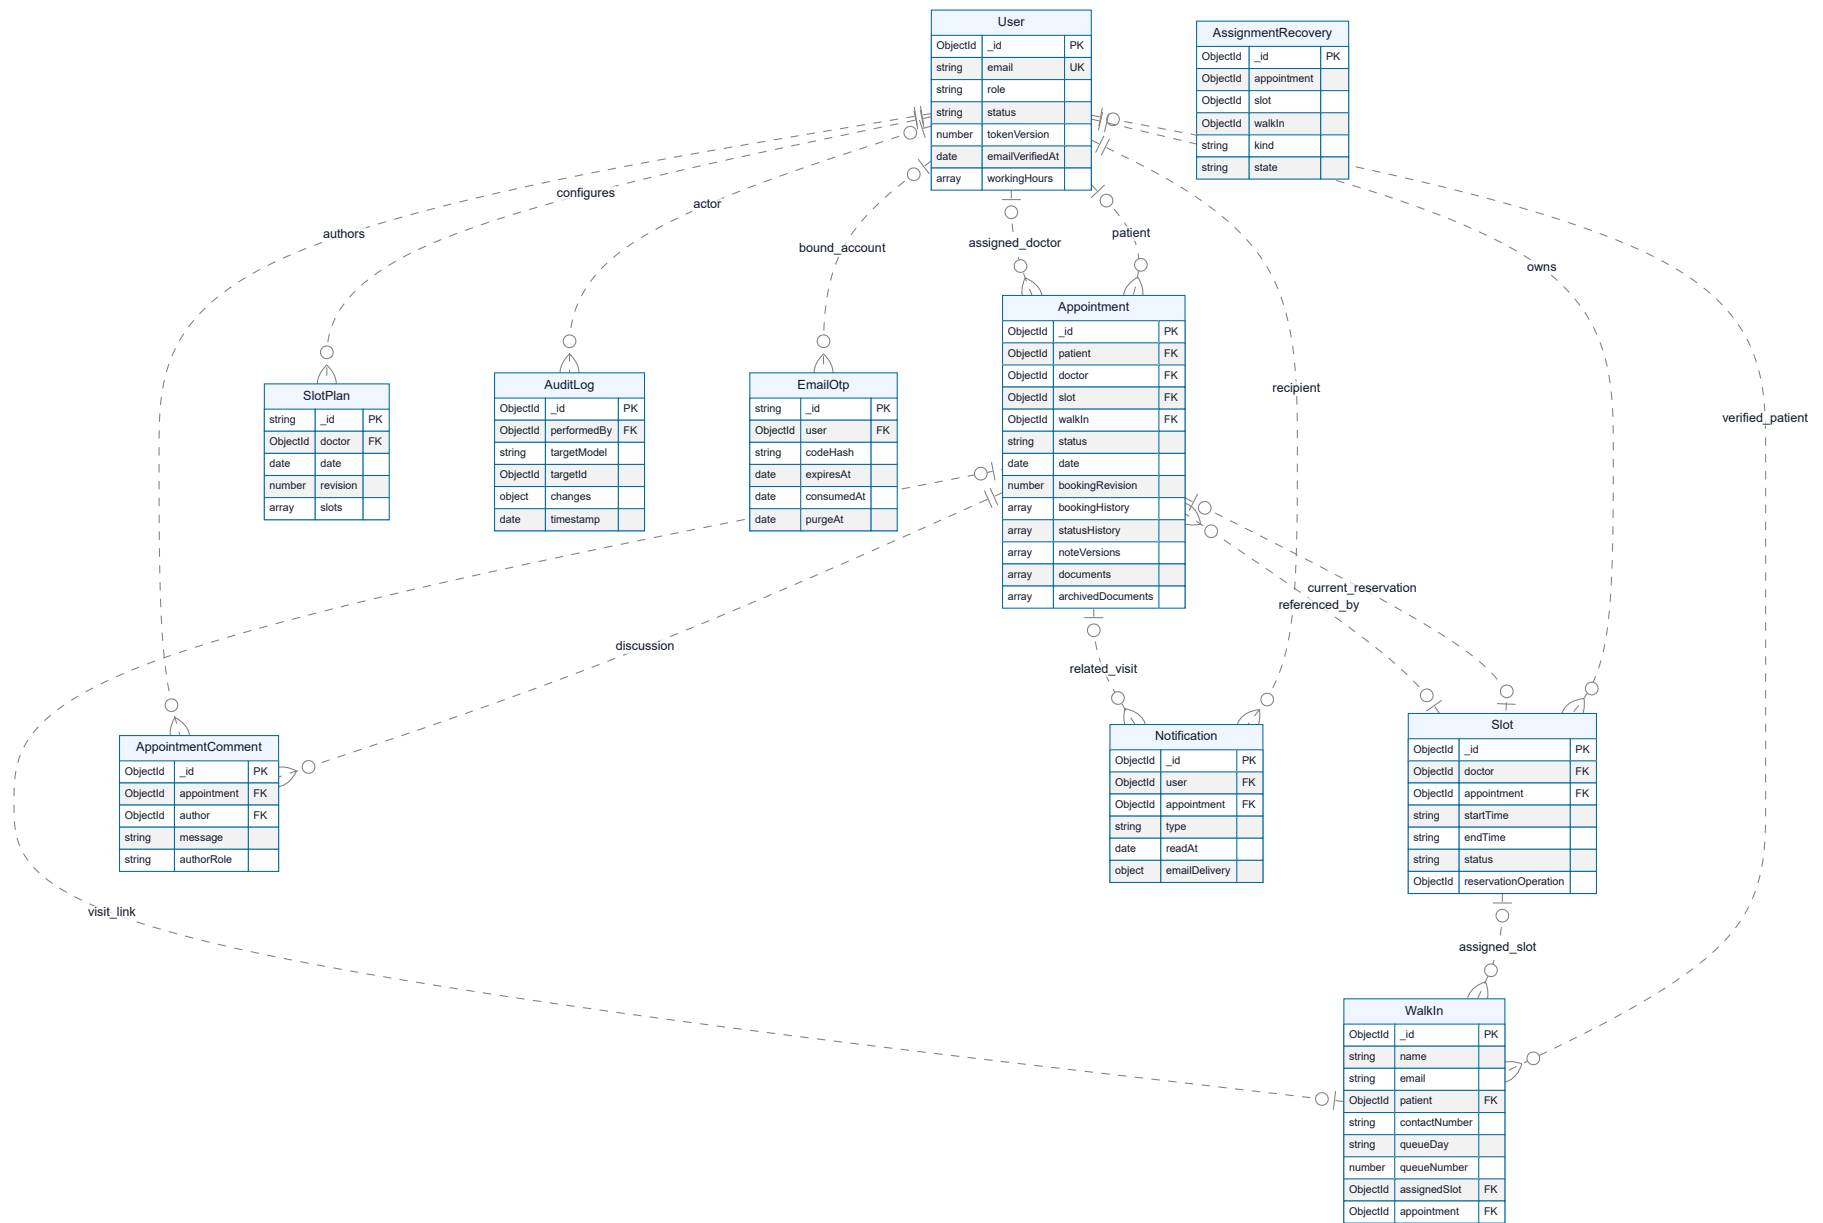

Figure 9. Logical database ERD; optional historical links are explained in the data dictionary.
